

• KEYNOTE

What does it take for an **AI-first company**?

From hype to real business impact.

Kira Engelhardt

Global Head of Data & AI

• WHY NOW

AI is faster and more disruptive than any previous technology.

66%

of Germans use AI tools – privately, at work or at university.

KPMG

300 million

jobs worldwide could be partially or completely replaced by AI.

GOLDMAN SACHS

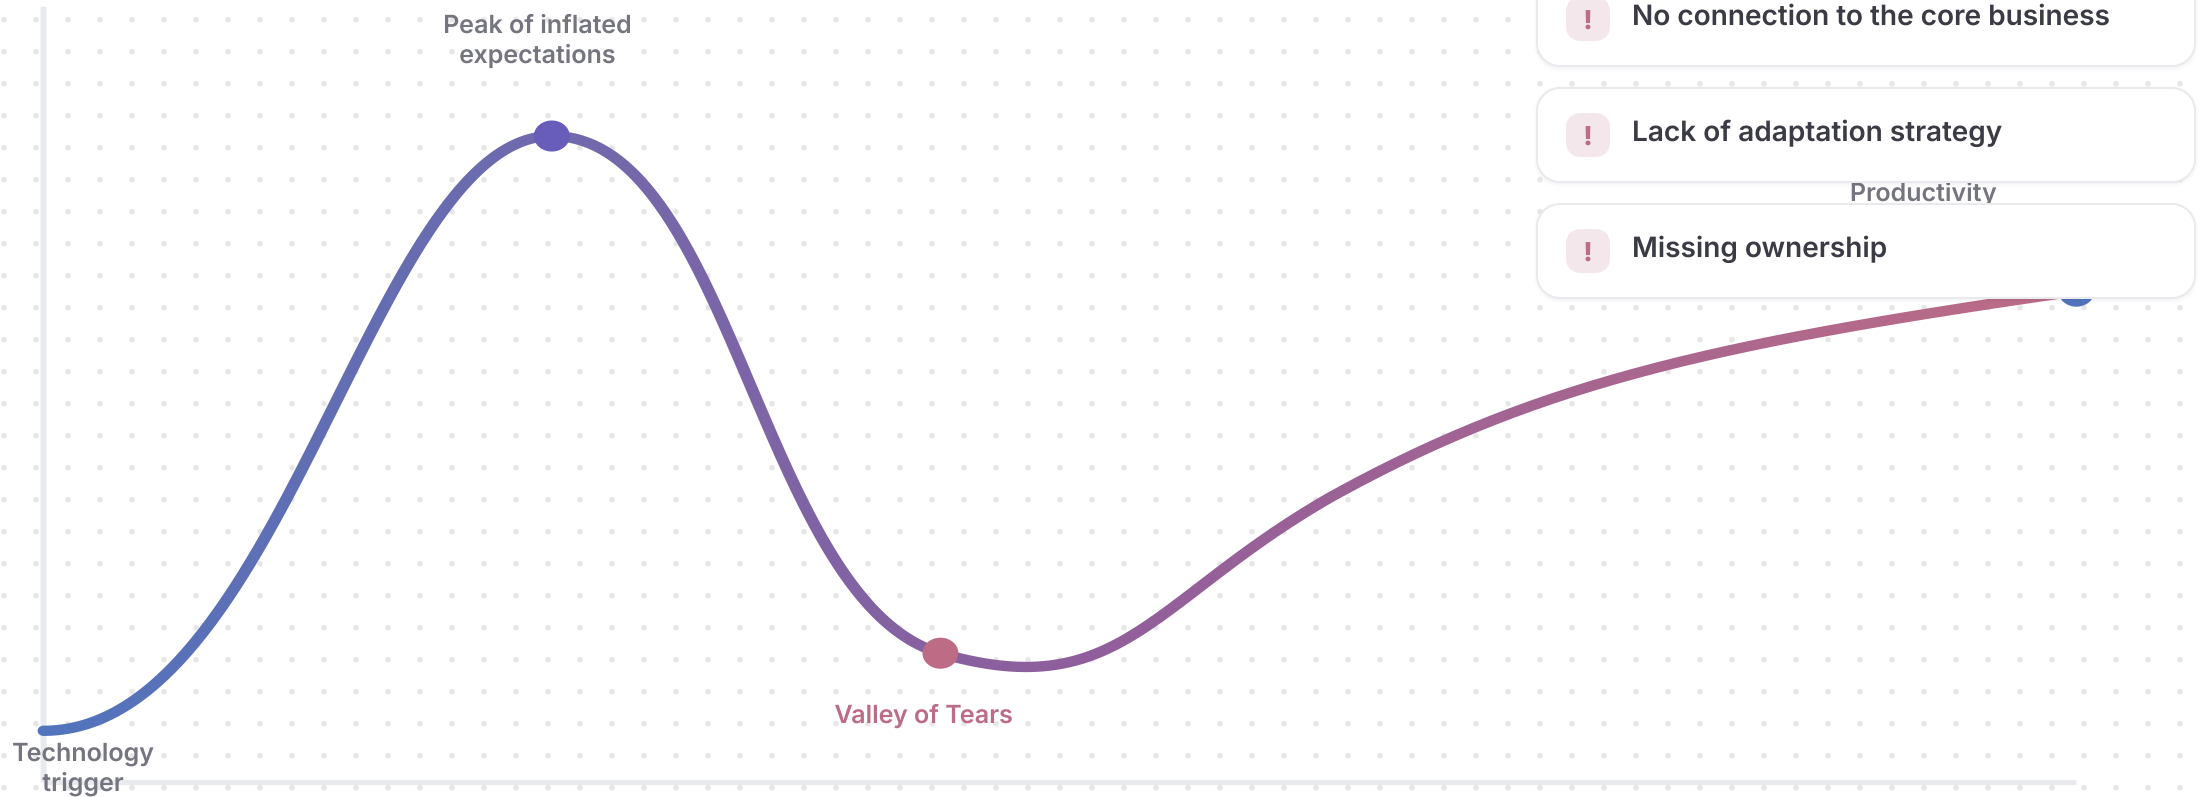

\$4.4 trillion

in value generative AI can unlock *every year*.

MCKINSEY

● THE REALITY CHECK

Most companies fail to create measurable value with AI.

What does it take for an **AI-first** company?

- 1 Where AI creates value
- 2 What successful adoption needs
- 3 How to get started

PART 1

Where **AI** creates value.

From efficiency to new business models.

• THE GUIDING QUESTION

**What does it take for AI to
become a driver of value
creation?**

● THE CORE THESIS

**AI is not an IT project.
AI transformation
requires leadership.**

Three impact levels – from efficiency to business model.

Transforming Core Processes

Optimize & automate – efficiency at scale.

- Automation: process mass transactions efficiently
- Optimization: improve core processes
- Efficiency: cost, speed & quality

Empowering Employees

More productive with AI in daily work.

- Productivity: copilots & AI agents
- Enablement: understand AI, prompting, reduce barriers
- New ways of working & collaboration

Creating New Business Models

New products, services & revenue streams beyond today's business.

- Data-driven services & platforms
- Outcome- & service-based models
- Personalized, scalable customer solutions

• PART 2 · GUIDING QUESTION

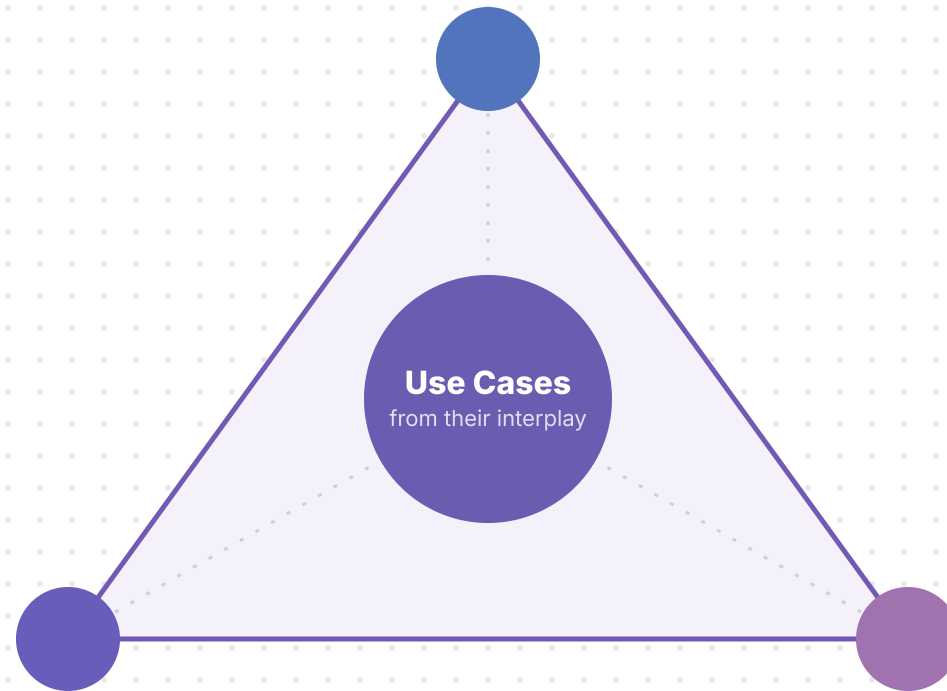

What does it take for successful AI adoption?

• THE THREE FORCES OF SUCCESSFUL AI

Leadership, technology and organization – use cases emerge from their intersection.

Leadership

Vision · Prioritization · Support

Technology

Data · Tools · Infrastructure

Organization & Culture

Processes · Competence · Acceptance

- **SUCCESS = BASIS + LEADERSHIP + ORGANIZATION**

Technology is the basis – leadership & organization decide.

LEADERSHIP

Set direction & decide where AI creates value.

- Understand business priorities & AI potential
- Decide where to apply AI (prioritization)
- Drive alignment & act as a role model

TECHNOLOGY

The scalable, secure foundation.

- Data quality & availability
- Platforms & infrastructure
- AI tools, models & security

ORGANIZATION

Embed AI effectively across the organization.

- Clear roles, responsibilities & governance
- Employee enablement & training
- Establish "AI Value" thinking

How AI use cases emerge **across impact levels.**

Transforming Core Processes

Structured · Top-down

- Start from strategic priorities & process pain points
- Analyze core processes & performance gaps
- Derive use cases from clearly defined problems

Empowering Employees

Bottom-up · Usage-driven

- Enable employees with AI tools (e.g. copilots)
- Encourage experimentation in daily work
- Identify recurring use cases from real usage

Creating New Business Models

Exploratory · Innovation-driven

- Start from customer needs & untapped opportunities
- Explore new value propositions & models
- Use innovation frameworks (e.g. JTBD)

Five steps to get started.

1 LEADERSHIP

Start with yourself

Use AI yourself – build your own agent

Understand capabilities through usage

Gain first-hand experience

2 URGENT

Enable productivity fast

AI is already being used – shape it

Provide the right tools quickly

Prevent shadow AI

3 FOUNDATION

Build the foundation

Assess skills & roles

Identify capability gaps

Build structure & responsibilities

4 PLATFORM

Build a scalable platform

Data, tools & infrastructure

Secure, integrated environment

Enable reuse & scalability

5 USE CASES

Prioritize use cases

Focus on high impact

Prioritize a few use cases

Start with MVPs & scale

Q & A

Questions & discussion

APPENDIX

Backup.

Deep-dive slides & practical material.

• WHAT IT COMES DOWN TO

**Our competitiveness is
not decided by
technology –
but by leaders who turn
AI into value creation.**

PRACTICE

How to get started?

From understanding to applying – prompting as the first lever.

● **ENABLEMENT OFFERING**

AI, knowledge & prompting as strategic levers.

For boards & N-1 · on-site · 10–15 participants

1 Strategic AI Workshop

- Identify strategic & operational challenges
- Map AI capabilities to challenges
- Prioritize use cases by impact
- Create a shared AI perspective

Business Impact · 5–6 hours

2 AI & Prompting Upskilling

- AI fundamentals – what leaders need to know
- Hands-on M365 Copilot training
- Prompting as a daily tool
- Strong practical relevance, high engagement

Enablement · 2–3 hours

● IMPACT

**Prompting increases
the productivity of
most employees.**

30–50%

faster decisions and execution
by automating routine tasks.

- ✓ **Less time** spent researching, analyzing and documenting.
- ✓ **Data-driven analyses** – faster and better founded.
- ✓ **Personalized solutions**, as increasingly expected.

What AI tools are available?

Copilot Chat

accessible to all

Comparable to ChatGPT

Uses OpenAI models (GPT), multimodal

No access to internal data

SharePoint Agents

requires license

SharePoint-based AI assistants

Makes info from folders & files accessible

For defined areas

M365 Copilot

for confidential content

Integrated into M365 apps

Access to personal M365 files

Cleared for strictly confidential content

• ONE OF THE MOST COMMON MISTAKES

Using AI only as a better search engine.

Treat AI like the most motivated intern you've ever had.

The building blocks of a good prompt.

1

Role

"In what role should the AI act?"

2

Task

"What should the AI do?"

3

Context

"What information is relevant?"

4

Format

"How should the result be structured?"

5

Restrictions

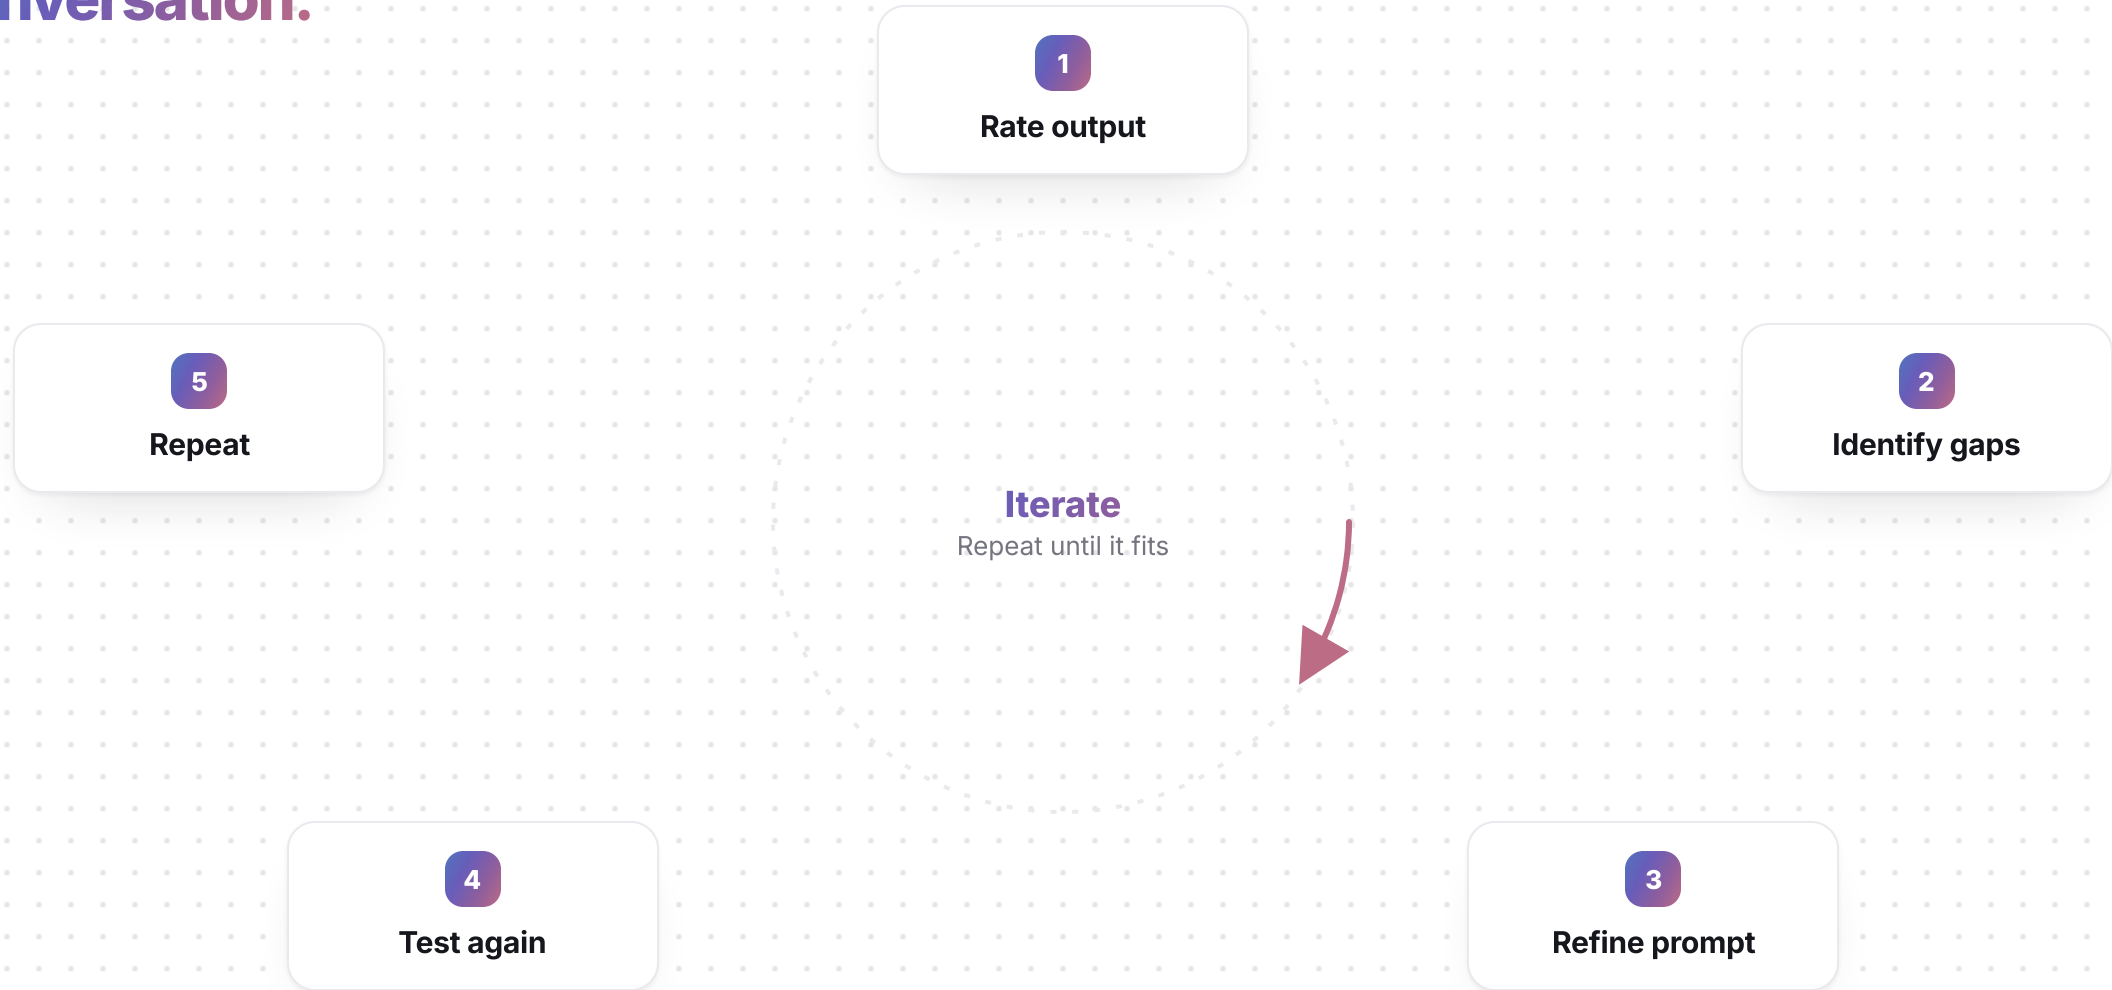

"What rules and restrictions apply?"

6

Tone of voice

"In what tone should the result be created?"

Good prompting is actually more of a conversation.

● TAKEAWAY

AI will not replace you.

• TAKEAWAY

**AI will not replace you.
But a human who uses AI
will.**

AI transforms value creation and empowers people.

Transforming Value Creation

Automation	Process mass transactions efficiently.
Optimization	Improve core processes.
Transformation	Make business models future-fit.

Empowering Employees

Productivity	Copilots & AI agents in daily work.
Enablement	Understand AI, reduce fears, learn prompting.
Empowerment	Create space for ideas and innovation.

- TECHNOLOGY IS THE BASIS – LEADERSHIP DECIDES

Technology is the basis – leadership determines success.
